

GLOOP

Gloop is an interesting mixture with a unique texture to explore and play with. Playing with Gloop is a fabulous sensory and science activity to learn about the concepts of what a solid and liquid is.

From birth, children are exploring their senses and processing new information. They begin to make sense of the world around them as they grow through the exploration of new textures, materials and resources. Sensory play is a valuable way of engaging children in activities that will heighten their senses and enrich their learning.

Active sensory play helps children become more self-aware and body-aware, which helps them develop a better sense of space around them.

PROCESS

Mix cornflour with water in a bowl or tray until it creates a paste.
Add a small amount of food colouring or flavouring for more fun.

As your child picks up the Gloop it will become a thick liquid which will run through their fingers and back into the bowl/tray.

Once finished, leave the Gloop overnight so that the cornflour and water separate.
You can then pour the liquid down the drain and add the solid to your bin.
